

A concise English explanation of Korean reference KR2002-82021 is as follows:

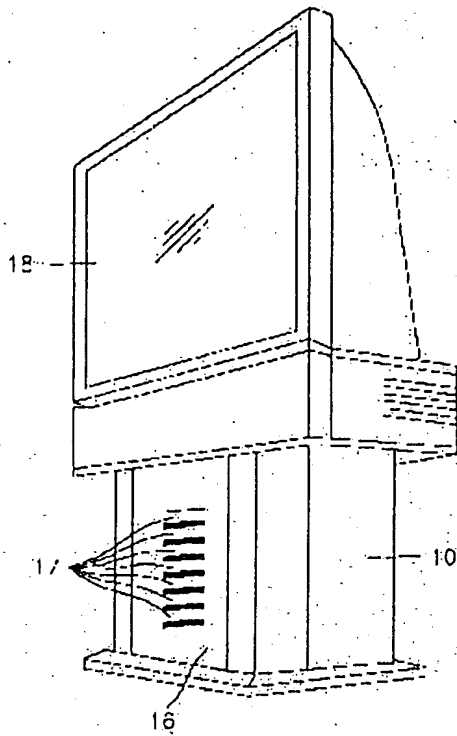

According to Korean reference KR2002-82021, an object is to provide a function extension module designed to process AV source data so that it can be decoded by a decoder contained in an AV system, and to send it to the AV system. Korean reference KR2002-82021 discloses a function extension module to be attached and connected to a module rack in a manner such that it can communicate with a base module capable of decoding received transmission stream data. The function extension module includes a converting portion for converting the AV source data into the transmission stream data, a communication interface portion for performing communications with the base module, and a control portion for sending the transmission stream data generated by the converting portion to the base module via the communication interface portion.
